

Accessories - SAC

Sample Chamber

Model SAC is a three-port sample chamber, which can be easily configured for transmittance, reflectance, absorbance, fluorescence or Raman measurements. All quartz lenses for excellent transmission in the spectral range 185 nm to 2.5 μm . Each quartz lens unit can be individually adjusted to provide either a collimated or focused beam depending upon the sample and application requirements. The SAC is compatible with the range of Zolix monochromators and spectrographs. Size: 330mm (W) x 280mm (D) x 213-243mm (H-adjustable). Weight: 10kg. The sample holder comprises of an XY and rotation stage which allows critical alignment and rotation of the sample to be performed in order to optimise the recorded signal. XY translation of 10mm in both axes, and rotation of 360° is possible.
